FITNESS BUDDY

Problem Statement No. 13 • IBM SkillsBuild for University Engagements • AICTE-2026

Domain	Health & Wellness / Education Technology	**Mandatory technology**	IBM Cloud Lite services / IBM Granite

The Challenge

In today's fast-paced world, many individuals struggle to maintain a healthy lifestyle due to a lack of personalized guidance, time constraints, and inconsistent motivation. Traditional fitness solutions may require expensive subscriptions, in-person consultations, or rigid schedules that do not adapt to personal preferences or daily routines. There is a need for an accessible, friendly, and intelligent virtual assistant that provides on-demand fitness advice, healthy lifestyle suggestions, and basic nutrition guidance tailored to individual needs.

Project Objective

Build a conversational, AI-powered health and fitness coach that helps users take small, realistic steps toward a more active lifestyle. Fitness Buddy should adapt its responses to user input such as their fitness goal, current level, available time, equipment, and food preference.

Core Functionalities

Personalized workouts: Recommend beginner-friendly home workouts and routines based on user input, time, fitness level, and equipment.

Motivation and inspiration: Provide supportive tips and practical ways to restart after a missed day.

Simple meal ideas: Suggest accessible, everyday meal ideas based on food preferences; avoid diagnosing or prescribing medical diets.

Habit-building: Encourage repeatable habits and show a simple weekly completion summary.

Conversational interaction: Allow users to ask for guidance in natural language and receive clear, actionable responses.

Required Technology

IBM Cloud Lite services and an IBM Granite model are mandatory for the AI component. This implementation uses IBM watsonx.ai for Granite inference, with a Python + Streamlit interface and a local SQLite database for habit tracking.

Responsible-use note

Fitness Buddy is an educational prototype, not a medical device or a substitute for a qualified health professional. It must not diagnose conditions, encourage extreme diets or workouts, or advise users to exercise through serious symptoms.
